LinkedIn | GitHub

SUMMARY

Software engineer with 3+ years across enterprise SaaS platforms in healthcare-compliance and test-automation domains, and a track record of independently shipping complete, deployed systems -- including a multi-tenant GDPR-compliance platform with an AI risk-analysis agent and a fleet-dispatch SaaS with a multi-agent AI planning engine.

EXPERIENCE

Software Engineer | Invictus Data (Client: Viome)

Jun 2025 - Present

Bangalore, India

- Own feature delivery across Viome's provider-portal platform (**bulk ordering, TOS/compliance versioning, pricing & feature flags**) spanning gateway, service, and portal layers.
- Own the **PHPRO PDF patient-report generation pipeline** end-to-end -- dynamic pagination, score visualizations, and index calculations -- through multiple rounds of production visual-QA fixes.
- Extended the shared **Klaviyo event-publishing pipeline** with new event types as features shipped, and unified user-creation logic across event processors.
- Migrated Slack alerting from webhooks to **Bot Token auth** and resolved a cluster of order-creation and shipping-address reliability issues.

Software Engineer | Testsigma Technologies

Sept 2023 - May 2025

Bangalore, India

- Developed and optimized core platform features including **AI-powered visual regression testing, Figma-based UI validation**, and the **Export Management module**.
- Created and deployed a custom **React Native Android app (SMS Forwarder)** for enterprise automation use cases.
- Handled **200+ critical production issues** and led multiple root cause analyses, improving product reliability and customer satisfaction.

Developer Intern | Testsigma Technologies

May 2022 - Aug 2023

Bangalore, India

- Built internal test platforms including a **Flight Booking Application** (ReactJS + Spring Boot) for validating automation workflows.
- Developed **Simply Travel mobile apps** (Android/iOS) in React Native, integrating APIs, local storage, and UI components.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript/JavaScript, SQL

Backend & AI: Spring-based Java services, FastAPI, NestJS, LangChain/LangGraph, OR-Tools, REST, JWT/OAuth2, SQLAlchemy/Alembic

Frontend & Mobile: React, Redux Toolkit, TanStack Query, Tailwind CSS, React Native, Appium

Data & Infra: PostgreSQL, MongoDB, Redis/BullMQ, Celery, Docker, Docker Compose, Render, GitHub Actions CI/CD

SELECTED PROJECTS

DataGuard - Built a multi-tenant GDPR-compliance platform end-to-end (9-service architecture: NestJS, Go, FastAPI, React, Postgres, MongoDB, Redis) with a SHA-256 tamper-evident audit log, an AI risk-analysis agent, and real-time SSE-streamed AI chat; shipped 3 client SDKs and deployed live.

FleetOpsX - Built a multi-tenant fleet-dispatch SaaS with a 3-phase multi-agent AI planning engine (LangGraph + OR-Tools VRPTW optimizer) over a Celery/Redis/Postgres/MongoDB stack, with live WebSocket progress streaming.

Maritime Operations Platforms (AllBlue & LogPose) - Built a cargo-booking/fleet-administration platform and a vessel daily-report viewer for a container-liner shipping client -- booking workflow, proforma P&L, document parsing/validation, and standards-mapped reporting.

xillion - Building a self-hosted algorithmic trading platform with a plugin architecture for strategies/brokers, a backtest engine, live broker integration, and a risk manager with a kill switch.

EDUCATION & ACHIEVEMENTS

B.E., Electronics and Communication Engineering - Sri Venkateswara College of Engineering

2019 - 2023

CGPA: **9.3/10** | Kancheepuram, Tamil Nadu

- **Customer Impact Award, Q2 2024** -- recognized for resolving 100+ high-impact production/customer issues with timely, effective fixes.
- **2nd Place, AI Hackathon 2024** -- built an AI-powered load-testing tool using OpenAI models for dynamic API test-data generation and criticality-based test prioritization.
