

SUMMARY

Full-stack engineer with **4+ years** building **distributed, scalable, reliable** systems in enterprise SaaS — **Java** and **React** day to day, **Python** for the AI work. Shipped **GenAI** features to production on **Google Gemini**, built multi-agent orchestration with **LangGraph**, an **LLM risk-analysis agent**, and **streaming AI chat**. Now running **release management**, cross-team coordination and mentoring alongside a full delivery load.

EXPERIENCE

Software Engineer | Viome

Bangalore, India

Jun 2025 - Present

- Own **release management** on a weekly sprint cadence — release notes and documentation on Confluence, cross-team task coordination via Jira — while mentoring and reviewing code for a developer intern, and carrying a full feature load.
- Deliver features across Viome's **Java provider-portal platform** — bulk ordering, TOS and compliance versioning, pricing and feature flags — spanning gateway, service and portal layers across **13 microservices** serving **100+ provider organizations**.
- Own a PDF patient-report generation pipeline running as an **Azure Function**. Identified a **concurrency bottleneck** — a cross-pod race condition on webhook writes — and rebuilt it from a pessimistic lock into a **lock-free atomic update**.
- Diagnosed a **JMS/AMQP protocol-tier mismatch** in an **Azure Service Bus** consumer, where a Spring Cloud Azure autoconfiguration bug masked a Standard-versus-Premium tier gap, and resolved it — the consumer stopped failing intermittently.
- Noticed from logs, not a reported incident, that a scheduled reporting job was firing on every replica instead of once. Fixed it with **ShedLock** for single-run guarantees, adding retry-tracked dispatch metadata and a version-gated rollout flag.
- Extended a shared **Klaviyo event-publishing pipeline** as new features shipped — bulk orders, online agreements, sample reissue, result releases — and unified user-creation logic across multiple event processors.

Software Engineer | Testsigma Technologies

Bangalore, India

Sep 2023 - May 2025

- Shipped the **GenAI visual-regression-testing** feature on **Google Gemini 2.0 Flash** — built the backend AI service and a Python suggestion engine using **prompt chaining**, gated to paid-tier organizations with per-org configuration, and integrated both into the product's AI Insights UI.
- Owned core parts of the **Java and Spring Boot test-execution engine** — **GraphQL/REST API testing** and cross-cloud device support through BrowserStack, SauceLabs and LambdaTest — and built infinite-scroll result views and **TypeSense-backed search** on the **Redux-driven** React/TypeScript frontend as ownership moved off a legacy Angular app.
- Cut recurring production defects by introducing **Redis-backed distributed locking** for visual-regression result writes, and ran **Helm-based CI/CD** release deployments across 5 platform services.

Graduate Trainee | Testsigma Technologies

Bangalore, India

May 2022 - Aug 2023

- Built a full-stack **flight-booking demo app** end to end: **React Native** with **Spring Boot** and **MySQL**, **JWT auth**, and dynamic multi-city search through **JPA specifications**. Testsigma adopted it as its reference app for product demos and tutorials.
- Developed the **Simply Travel mobile apps** for Android and iOS in **React Native**, integrating APIs, local storage and UI components.

TECHNICAL SKILLS

AI & Agentic Systems: LangChain/LangGraph multi-agent orchestration, OR-Tools, Claude/Gemini/OpenAI multi-provider integration, LLM risk analysis, SSE-streamed AI chat, Qdrant

Backend: Java, Python, TypeScript/Node.js, Spring-based services, FastAPI, NestJS, REST, GraphQL, JWT/OAuth2, SQLAlchemy/Alembic, JUnit, Mockito, pytest

Frontend & Mobile: React, Redux Toolkit, TanStack Query, Tailwind CSS, React Native, Appium, Vitest, React Testing Library

DevOps & Data: Docker, Docker Compose, AWS S3, Azure Functions, Azure Service Bus, Render, GitHub Actions CI/CD, ShedLock, Agile/Scrum, TypeSense, Kibana/Elastic (log analysis), Selenium, Postman, PostgreSQL, MongoDB, Redis/BullMQ, Celery

SELECTED PROJECTS

DataGuard (GitHub) — A multi-tenant **GDPR-compliance platform** built across nine services (NestJS, Go, FastAPI, React, Postgres, MongoDB, Redis), with a **SHA-256 tamper-evident audit log** and a multi-provider **AI risk-analysis agent** sitting behind an adapter pattern. Ships with three client SDKs and is deployed live.

FleetOpsX (Backend / Frontend) — A multi-tenant **fleet-dispatch SaaS** whose planning engine runs three phases of **multi-agent AI**, with **LangGraph** driving an **OR-Tools VRPTW optimizer** over a Celery, Redis, Postgres and MongoDB stack. Progress streams live to the client over WebSocket.

Xillion (GitHub) — A self-hosted **algorithmic trading platform** with a plugin registry built on the **Strategy pattern**: drop in a Python file to add a strategy or a broker, with no changes to the core. Includes a backtest engine, live broker integration, and a risk manager with a kill switch.

EDUCATION & ACHIEVEMENTS

B.E., Electronics and Communication Engineering - Sri Venkateswara College of Engineering

CGPA: 9.3/10 | Chennai, Tamil Nadu

2019 - 2023

Certifications: Anthropic — Agent Skills, MCP, Claude Code, Claude API

- Customer Impact Award, Q2 2024**, for resolving **100+ high-impact** production and customer issues with fixes that landed quickly and held up.
- 2nd Place, AI Hackathon 2024**, for an **AI-powered load-testing tool** (OpenAI) that generated test data dynamically and prioritised cases by criticality.
